

Rodney S. Finger

FINGER FURNITURE COMPANY OF TEXAS

November 2003

To whom it may concern:

Finger Furniture decided in 2002 to upgrade its telecommunications network. We had a mixture of several different systems and wanted to invest in a solution that would provide cutting edge technology for today and investment protection for tomorrow.

After entertaining proposals from different Manufacturer's and Distributor's, Enterprise Systems Corporation was chosen in February 2003. Sean Pyykola presented a Nortel Networks solution that met the technology, investment protection and value Finger Furniture had mandated.

The Enterprise Systems technical team cutover a large Option 81C at our Corporate Office on the Gulf Freeway, as well as two Option 11C systems and five Norstars at additional locations. All locations were networked together and utilize the same voice mail system. They also implemented four digit dialing between all of our locations and an automated attendant.

I would not hesitate to recommend Sean Pyykola and Enterprise Systems Corporation to any business looking for a technology partner. I have been very impressed with both the level of professionalism and valuable consultation provided by Sean and the sales team. Additionally the installations of the Meridian 1 and Norstar systems were handled in a very organized manner, with project managers communicating with Finger personnel through completion of the entire project. The systems were cutover with a minimal disruption to our core business.

Sincerely,

Rodney Finger
Vice President
