

# Connected Emergency Services Technologies

Global Leader in 4G LTE Network Solutions

Ambulances need flexible mobile connectivity that can stand up to physical abuse, high and low temperatures, and physical contaminants, all while still performing flawlessly. With 3G/4G/LTE, emergency vehicles can use the in-vehicle connectivity to power mission-critical applications, not only for accessing patient records, but also for diagnosing and monitoring patients in the field. The demands for high-availability in these applications are not only mission-critical but are also life-dependent in most cases.

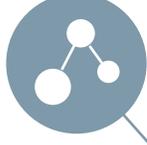

## Cradlepoint Router

Cradlepoint's COR family provides rugged, reliable routing for In-Vehicle Networks

## Multi-band Antenna

Broadcast WiFi, track the emergency vehicle, and increase cellular signal

## Connected Medical Devices

Monitor, analyze, and diagnose patients on the road

## Rugged Laptop

Access dispatch information (CAD), monitor response times, and look up patient records

## Enterprise Cloud Manager

Centralized, intelligent cloud networking platform used for configuration, monitoring, and remote management of Cradlepoint devices

## Wireless Tablet

Look up vital information and update records immediately
